OUR ORGANIZATION AND EQUIPMENT

The technical education in Landscape Architecture and Horticulture of members of our firm added to our practical knowledge, long experience, and seventeen years' residence on the Eastern Shore enables us to serve you adequately. We are fully equipped to take care of your landscape and garden needs.

Our Guarantee

Please Read

We guarantee our nursery stock when the customers do their part. We will replace any plant that does not commence to grow when supplied and planted by us, providing adequate care is given by the customer in the way of water and cultivation. The object of this guarantee is to give the true garden and plant lover the complete success with our plants that we want them to have. No responsibility can be assumed for the customer's neglect, nor for failure due to unusual weather conditions. We will gladly give the plants proper care at a nominal labor charge, should you be unable to care for them.

The prices are for plants dug and delivered in this vicinity.

1929 - 1939

Our Tenth Anniversary

Injudicious though it proved to be, we started the Eastern Shore Nurseries in 1929. Having survived, we attribute to the patronage of our customers whom we thank and to growing a product which merited their patronage. Each year we make a step nearer our goal of offering a complete landscape and garden service to our customers on the Eastern Shore. This year we have a new herbaceous perennial department and invite you to come and see our neat acre and more of beds full of choice field-grown plants.

A GARDEN IS FOR PLEASURE

Gardening has long been a tradition of the leisured and quiet life on the colonial estates of the Eastern Shore of Maryland's Chesapeake Bay region. Our organization has been developed with the one thought in mind, of helping our clientele who have located here increase the Eastern Shore's fame as a gardened spot.

In this little booklet you will find listed plants that we know are particularly suited to the soils and climate of the Eastern Shore. All of the plants included with the exception of the fruit trees and roses are grown and tested in our nurseries.

Bulbs

The gay Tulips, Daffodils, and Hyacinths and the pretty little Scilla, Muscari and Snowdrops are some of the spring bulbs that flower well on the Eastern Shore. Write for our folder on Bulbs.

Your Garden

Planning can be done by simple staking on the grounds, by rough sketches, or by complete landscape plans. Any one of these methods can be used by us to suit your needs. The plan is necessary so that each individual feature is located to fit into the scheme as a whole. Not only the color, the texture and the character of the plants, but their future growth in relation to their surroundings is considered.

ESTATE AND GARDEN SUPERVISION

Fortunate is the estate owner who has a trained gardener with initiative enough to look out for pests, prevent destruction of trees and plants by timely attention and a constant interest in the improvement of the grounds.

Many owners are their own gardeners yet feel the need of an expert to advise with them at stated periods, or visit in their absence and see that everything in the garden and grounds is being looked after.

This professional service has grown at the request of a number of our clients and takes the form of a monthly visit by appointment when advice is given verbally or by written report.

The charge is nominal, merely sufficient to cover time and transportation.

Our varied and long experience is here to serve your interests.

YOUR ROSE GARDEN

The Eastern Shore is a wonderful rose growing country. The winters are mild enough to grow a great variety. The two best seasons for bloom, spring and fall are long, making rich colored flowers and luxuriant foliage.

Plant your roses in rich warm, fairly heavy soil, spaced two feet apart and if possible protect from the wind by a fence or hedge. The soil should be prepared to a foot in depth and fertilized with manure or a well-balanced garden fertilizer. It is important to grow a healthy plant before letting it flower. Disbudding and not cutting too much of the foliage are good practices the first season. Keep your roses clean by spraying for black spot with Bordeaux, collecting all dead leaves and flowers and burning them. In the fall it is a good practice to remove the top layer of soil and replace with other top soil before mulching with manure.

Plant standard varieties, several of one kind so that you will have enough blooms for picking and plant only the very best grade of Roses—

SPECIMEN PLANTS

We have on our nurseries some fine big shade trees, evergreens and choice shrubs. These are ideal for planting for immediate effect. Since the customer will usually select these plants on the nursery and since planting conditions vary we are listing below the approximate size and cost **planted** in the nearby vicinity. Since these specimens have to be moved with large balls of earth they are quoted planted, all other plants in this catalog are quoted dug for delivery.

Lawns

To get the best lawns possible on the Eastern Shore, it is necessary to prepare the soil properly. It is advisable to thoroughly cultivate and loosen the surface several inches deep. Nearly all soils are sadly deficient in humus, so that it is desirable to add up to an inch to the whole surface of the lawn area. This should be well mixed in. Any good lawn fertilizer should be added; lime is not so necessary unless a Blue Grass lawn is desired. We do not recommend Kentucky Blue Grass for this section. Fall is the best time for seeding lawns. If you do not have competent help for preparing lawns, we do.

We offer the grass seed mixture found by continued testing to be the best for this section.

GRASS SEED

1 lb. ----- \$.55

10 lb. ----- 5.00

20 lb. ----- 9.50

100 lb. ----- 45.00

FERTILIZER

A good fertilizer for lawn and flower garden is Vigoro which is a 4-12-4 organic fertilizer.

100 lb. bag ----- \$4.00

HYPER—HUMUS

Hyper-Humus is the very finest form of organic matter for building up the soil in lawns and gardens. Added to the soil it reduces dangers of drying and increases the fertility by acting as a carrier for fertilizer. For lawns add one-third to one inch of Hyper-Humus and mix in the soil. For plants, add about one-fourth by volume of Hyper-Humus to the soil when planting. Use it as a mulch.

100 lb. bag ----- \$ 1.50

1 ton ----- 15.00

Perennials

A good perennial border is often the most attractive and satisfying feature of the garden. Use standard varieties planted in wide border against a good background. Have three zones of heights; bulky plants in the back, medium heavy and spikey plants in the middle ground and the dwarf varieties in front. Use color combinations and not color schemes.

We have developed a nice collection of over ninety varieties of two-year field grown perennials. Let us plan and make a perennial garden for you.

Chestnuts

Potentially of good possibilities as a crop on the Eastern Shore in the Chinese Chestnut. Introduced by the United States Department of Agriculture it has a sweet nut.

CASTANEA MOLLISSIMA (Chinese Chestnut)

1 year Seedlings -----	\$.50
2 year Seedlings -----	1.00
3 year Transplants -----	2.50

Not a tree but a beautiful shrub with shiny leaves in the Japanese Chestnut. While the nut is not quite so choice as the former it is of value as a landscape plant as well as for its crop. Bears at an early age.
